BULGARIAN COMMUNICATIONS EQUIPMENT

TWO TYPES OF RADIOS ON MARKET -- Sofia, Elektroenergiya, Mar - Apr 52

The "Kliment Voroshilov" slabotokoviy a zavod (Low Current Plant) [in Sofia?] has thus far put two types of radio receivers on the market; Model 504 with four tubes, with a sensitivity of 15 microvolts, and with short-, medium-, and long-wave reception; and the Model 506 concert model with six tubes, a larger loud-speaker than that of the 504, and four bands (two short-wave bands, one medium band, and one long band).

The plant also produces amplifiers for squares, halls, railroad stations, railroad cars and streetcars. Its 180-watt amplifier can be connected with 540 small speakers, its 240-watt amplifier with 720 small speakers, and its 400-watt amplifier with 1,200 small speakers or [all of these with] a relative number of powerful loud-speakers. Five of the plant's 400-watt power-output stages (krayno stupalo) can form a 2-kilowatt radiofication installation.

A studio control room (komandno byuro) consists of two receivers, two pre-amplifiers, one amplifier, two turntables (phonographs), two control speakers, one tone generator, two rectifier groups for the preamplifiers, and one signal installation rectifier. -- Y. Klayn

DICTAPHONES PRODUCED -- Sofia, Vecherni Mavini, 19 Sep 52

The "Kliment Voroshilov" Plant recently mastered the serial production of dictaphones, which will be used in X-ray institutes and rooms. This type of dictaphone, which was developed by Engr Ivan Vulchev and electrical technician Emil Rakudzhiev, consists of two speakers and two microphones.
